'Life is abundant and life is beautiful. And it's a good place that we're all in, you know, on this earth, IF we take care of it'

Alice Walker, American novelist and social activist.

August 2024 – the 'greenest month' for electricity in the UK – ever!! Maybe focusing on the positive and beautiful will elicit more attention, gain more traction, and help spur us on to take care of our planet, more than hearing about heatwaves, droughts and floods ... that's where Young Climate Warriors comes in!

Young Climate Warriors this summer have been finding awe-inspiring patterns in nature – many stunningly beautiful. [Tom Hegen's photos in the series - 'Here comes the sun'](#) are of solar arrays – manmade patterns – maybe they could be considered beautiful because of their intrinsic role in helping to combat climate change?

We don't all have 'beautiful' solar panels, but we're kicking off the Autumn term on a positive note thinking about monitoring our household electricity consumption and how we can all take simple actions to reduce it.

Combatting climate change ... you hold a 'key'!

ELECTRICITY – it's easy to take it for granted ...

Can you find a very special 'key' ... for your electricity meter ... and use it to open your meter (with help from your parent/carer). Or hunt down your smart meter!

Read your electricity meter each day at the same time – and work out how much electricity your household uses per day – in September.

We can help combat climate change by reducing our electricity consumption – it's easier to monitor and reduce once you know how much you're using.

Electricity challenge!

When you've completed this challenge ... Remember to hit the red button!
